Academic Review :

An academic review was undertaken at the school to assess the overall academic progress of the students and to review the effectiveness of the teaching-learning process.

The review primarily focused on the **academic performance of students in different classes and subjects**, with special reference to the recently conducted **Unit Test–II**. The performance of students was analysed to identify their areas of strength, learning gaps, and areas requiring additional academic support. Students who were found to require improvement were identified for closer monitoring and appropriate academic intervention.

The teachers reviewed the **syllabus completion status, students' classroom participation, attendance, academic performance, regularity in submission of classwork/homework, and learning outcomes**. The performance data of students was also considered for planning further teaching strategies and providing individual attention wherever required.

Special emphasis was given to **remedial teaching, regular practice, revision, individual guidance, and continuous assessment** for students who were comparatively weak in particular subjects. Teachers were advised to monitor the progress of such students regularly and to take timely corrective measures to improve their academic performance.

The Academic Review also emphasized the importance of maintaining **regular communication with parents** regarding students' academic progress.

The Academic Review was therefore useful in assessing the current academic status of students and in planning necessary interventions for achieving better academic outcomes during the forthcoming months.
